10.1. Fault Code Messages

Declaration of Conformity

esco hereby states that the **esco***drives* S3 product range conforms to the relevant safety provisions of the following council directives: 2004/108/EC (EMC) and 2006/95/EC (LVD) (Valid until 20.04.2016) 2014/30/EU (EMC) and 2014/35/EU (LVD) (Valid from 20.04.2016)

Designed and manufacture is in accordance with the following harmonised European standards:

EN 61800-5-1: 2007	Adjustable speed electrical power drive systems. Safety requirements. Electrical, thermal and energy.
EN 61800-3: 2004 /A1 2012	Adjustable speed electrical power drive systems. EMC requirements and specific test methods
EN 55011: 2007	Limits and Methods of measurement of radio disturbance characteristics of industrial, scientific and medical (ISM) radio-frequency equipment (EMC)
EN60529 : 1992	Specifications for degrees of protection provided by enclosures

Electromagnetic Compatibility

All **esco***drives* are designed with high standards of EMC in mind. All versions suitable for operation on Single Phase 230 volt and Three Phase 400 volt supplies and intended for use within the European Union are fitted with an internal EMC filter. This EMC filter is designed to reduce the conducted emissions back into the mains supply via the power cables for compliance with the above harmonised European standards. It is the responsibility of the installer to ensure that the equipment or system into which the product is incorporated complies with the EMC legislation of the country of use, and the relevant category. Within the European Union, equipment into which this product is incorporated must comply with the EMC Directive 2004/108/EC. This User Guide provides guidance to ensure that the applicable standards may be achieved.

All rights reserved. No part of this User Guide may be reproduced or transmitted in any form or by any means, electrical or mechanical including photocopying, recording or by any information storage or retrieval system without permission in writing from the publisher.

All **esco***drives* units carry a 2 year warranty against manufacturing defects from the date of manufacture. The manufacturer accepts no liability for any damage caused during or resulting from transport, receipt of delivery, installation or commissioning. The manufacturer also accepts no liability for damage or consequences resulting from inappropriate, negligent or incorrect installation, incorrect adjustment of the operating parameters of the drive, incorrect matching of the drive to the motor, incorrect installation, unacceptable dust, moisture, corrosive substances, excessive vibration or ambient temperatures outside of the design specification.

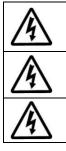

The local distributor may offer different terms and conditions at their discretion, and in all cases concerning warranty, the local distributor should be contacted first.

This user guide is the "original instructions" document. All non-English versions are translations of the "original instructions".

The contents of this User Guide are believed to be correct at the time of printing. In the interest of a commitment to a policy of continuous improvement, the manufacturer reserves the right to change the specification of the product or its performance or the contents of the User Guide without notice.

This User Guide is for use with version 3.04 Firmware. User Guide Revision 1.20

esco adopts a policy of continuous improvement and whilst every effort has been made to provide accurate and up to date information, the information contained in this User Guide should be used for guidance purposes only and does not form the part of any contract.

This manual is intended as a guide for proper installation. esco cannot assume responsibility for the compliance or the noncompliance to any code, national, local or otherwise, for the proper installation of this drive or associated equipment. A hazard of personal injury and/or equipment damage exists if codes are ignored during installation.

This **esco***drives* contains high voltage capacitors that take time to discharge after removal of the main supply. Before working on the drive, ensure isolation of the main supply from line inputs. Wait ten (10) minutes for the capacitors to discharge to safe voltage levels. Failure to observe this precaution could result in severe bodily injury or loss of life.

Only qualified electrical personnel familiar with the construction and operation of this equipment and the hazards involved should install, adjust, operate, or service this equipment. Read and understand this manual and other applicable manuals in their entirety before proceeding. Failure to observe this precaution could result in severe bodily injury or loss of life.

1. Quick Start Up

1.1. Important Safety Information

Please read the IMPORTANT SAFETY INFORMATION below, and all Warning and Caution information elsewhere.

Δ	Danger: Indicates a risk of electric shock, which, if not		Danger: Indicates a potentially hazardous situation						
/4\	avoided, could result in damage to the equipment and		other than electrical, which if not avoided, could						
	possible injury or death.	\frown	result in damage to property.						
	This variable speed drive product (esco drives) is intended for	professiona	l incorporation into complete equipment or systems as						
	part of a fixed installation. If installed incorrectly it may presen	nt a safety h	azard. The esco drives uses high voltages and currents,						
	carries a high level of stored electrical energy, and is used to co	ontrol mech	anical plant that may cause injury. Close attention is						
	required to system design and electrical installation to avoid ha	azards in eit	her normal operation or in the event of equipment						
	malfunction. Only qualified electricians are allowed to install a	nd maintair	this product.						
	System design, installation, commissioning and maintenance m	nust be carr	ied out only by personnel who have the necessary						
	training and experience. They must carefully read this safety in	nformation a	and the instructions in this Guide and follow all						
	information regarding transport, storage, installation and use of the esco drives, including the specified enviro								
	limitations.								
	Do not perform any flash test or voltage withstand test on the	escodrives	. Any electrical measurements required should be						
	carried out with the esco drives disconnected.								
A	Electric shock hazard! Disconnect and ISOLATE the escodrives	before atte	mpting any work on it. High voltages are present at the						
/7\	terminals and within the drive for up to 10 minutes after disco	nnection of	the electrical supply. Always ensure by using a suitable						
	multimeter that no voltage is present on any drive power term	ninals prior t	o commencing any work.						
	Where supply to the drive is through a plug and socket connec	ctor, do not	disconnect until 10 minutes have elapsed after turning						
	off the supply.								
	Ensure correct earthing connections. The earth cable must be	sufficient to	o carry the maximum supply fault current which						
	normally will be limited by the fuses or MCB. Suitably rated fus	ses or MCB	should be fitted in the mains supply to the drive,						
	according to any local legislation or codes.								
	Ensure correct earthing connections and cable selection as per	r defined by	local legislation or codes. The drive may have a						
	leakage current of greater than 3.5mA; furthermore the earth	cable must	be sufficient to carry the maximum supply fault current						
	which normally will be limited by the fuses or MCB. Suitably ra	ited fuses or	MCB should be fitted in the mains supply to the drive,						
	according to any local legislation or codes.								
	Do not carry out any work on the drive control cables whilst po	ower is appl	ied to the drive or to the external control circuits.						
	Within the European Union, all machinery in which this produc	ct is used m	ust comply with Directive 2006/42/EC, Safety of						
	Machinery. In particular, the machine manufacturer is responsible for providing a main switch and ensuring the electrical								
	equipment complies with EN60204-1.								
	The level of integrity offered by the esco drives control input f	unctions – f	or example stop/start, forward/reverse and maximum						
	speed is not sufficient for use in safety-critical applications with	hout indepe	endent channels of protection. All applications where						
	malfunction could cause injury or loss of life must be subject to	o a risk asse	ssment and further protection provided where needed.						
	The driven motor can start at power up if the enable input sign	nal is presen	t.						
	The STOP function does not remove potentially lethal high volt	tages. ISOLA	TE the drive and wait 10 minutes before starting any						
	work on it. Never carry out any work on the Drive, Motor or M	lotor cable v	vhilst the input power is still applied.						
	The escodrives can be programmed to operate the driven more	tor at speed	s above or below the speed achieved when connecting						
	the motor directly to the mains supply. Obtain confirmation fro	om the mar	ufacturers of the motor and the driven machine about						
	suitability for operation over the intended speed range prior to	o machine s	tart up.						
	Do not activate the automatic fault reset function on any syste	ems whereb	y this may cause a potentially dangerous situation.						
	IP20 drives must be installed in a pollution degree 2 environme	ent, mounte	ed in a cabinet with IP54 or better.						
	escodrives are intended for indoor use only.								
\frown	When mounting the drive, ensure that sufficient cooling is pro-	vided. Do n	ot carry out drilling operations with the drive in place,						
	dust and swarf from drilling may lead to damage.								
	The entry of conductive or flammable foreign bodies should be	e prevented	. Flammable material should not be placed close to the						
	drive								
	Relative humidity must be less than 95% (non-condensing).								
	Ensure that the supply voltage, frequency and no. of phases (1	or 3 phase	correspond to the rating of the esco drives as						
	delivered.								
	Never connect the mains power supply to the Output terminal	ls U, V, W.							
	Do not install any type of automatic switchgear between the d								
	Wherever control cabling is close to power cabling, maintain a	minimum s	eparation of 100 mm and arrange crossings at 90						
	degrees								
	Ensure that all terminals are tightened to the appropriate torq								
	Do not attempt to carry out any repair of the esco drives. In th	ne case of su	spected fault or malfunction, contact your local						
	escodrives Sales Partner for further assistance.								

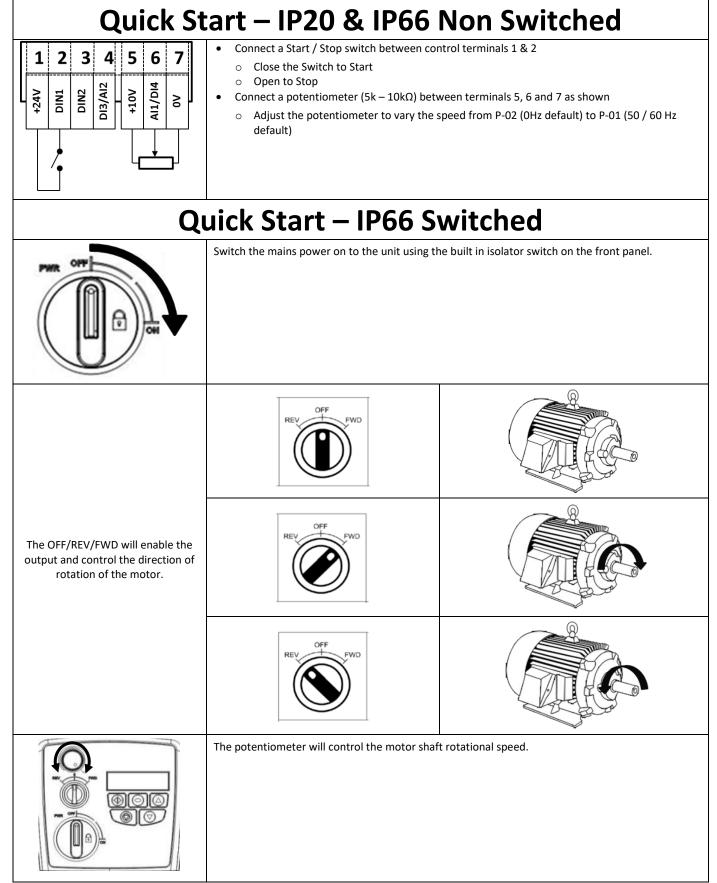

1.2. Quick Start Process

Step	Action		See Section
1	Identify the Enclosure Type, Model Type and ratings of	2.1	Identifying the Drive by Model Number
	your drive from the model code on the label. In particular		
	- Check the voltage rating suits the incoming supply		
	- Check the output current capacity meets or exceeds		
	the full load current for the intended motor		
2	Unpack and check the drive. Notify the supplier and		
	shipper immediately of any damage.		
3	Ensure correct ambient and environmental conditions for	9.1	Environmental
	the drive are met by the proposed mounting location.	-	
4	Install the drive in a suitable cabinet (IP20 Units) ensuring	3.1	General
•	suitable cooling air is available. Mount the drive to the	3.3	Mechanical Dimensions and Mounting – IP20 Open Units

1.3. Installation Following a Period of Storage

If the drive has not been powered, either unused or in storage, the DC Link Capacitors require reforming before power may be connected to the drive. Refer to your local sales partner for information regarding the correct procedure.

1.4. Quick Start Overview

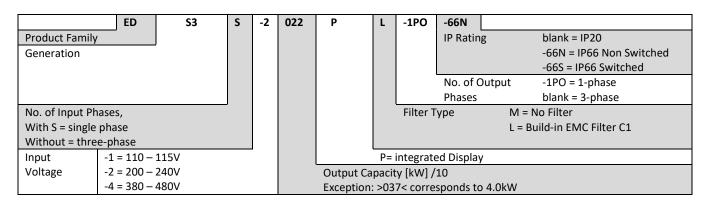

2. General Information and Ratings

This chapter contains information about the **esco**drives S3 including how to identify the drive

2.1. Identifying the Drive by Model Number

Each drive can be identified by its model number, as shown in the table below. The model number is on the shipping label and the drive nameplate. The model number includes the drive and any options.

2.2 Drive Model Numbers

200 - 240V + / - 10	% - 1Phase Input –	3 Phase O	utput		
Model N	1.34/		Output	Frame	
With Filter "C1"	Without Filter	kW	HP	Current (A)	Size
EDS3S-2004PL		0,37	0,5	2,3	1
EDS3S-2007PL		0,75	1	4,3	1
EDS3S-2015PL		1,5	2	7	1
EDS3S-2022PL		2,2	3	10,5	2
200 - 240V + / - 10	% - 3Phase Input –	3 Phase O	utput		
Model N	1.3.47		Output	Frame	
With Filter	Without Filter	kW	HP	Current (A)	Size
	EDS3-2004PM	0,37	0,5	2,3	1
	EDS3-2007PM	0,75	1	4,3	1
EDS3-2015PL		1,5	2	7	2

EDS3-4220PL		22	30	46	4
NOTE	For IP66 models v For IP66 models v		-		

3. Mechanical Installation

3.1. General

The **esco***drives* should be mounted in a vertical position only, on a flat, flame resistant, vibration free mounting using the integral mounting holes or DIN Rail clip (Frame Sizes 1 and 2 only).

IP20 escodrives must be installed in a pollution degree 1 or 2 environment only.

Do not mount flammable material close to the **esco**drives

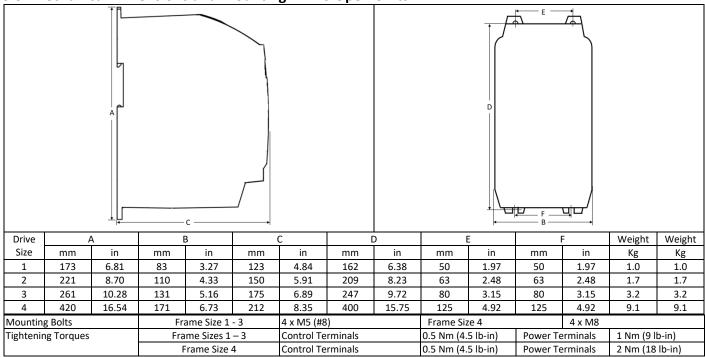

Ensure that the minimum cooling air gaps, as detailed in section 3.4 and 3.6 are left clear

Ensure that the ambient temperature range does not exceed the permissible limits for the **esco**drives given in section 9.1 Provide suitable clean, moisture and contaminant free cooling air sufficient to fulfil the cooling requirements of the **esco**drives

3.2. UL Compliant Installation

Refer to section 9.4 on page 28 for Additional Information for UL Compliance.

3.4. Guidelines for Enclosure Mounting - IP20 Units

IP20 drives are suitable for use in pollution degree 1 environments, according to IEC-664-1. For pollution degree 2 or higher environments, drives should be mounted in a suitable control cabinet with sufficient ingress protection to maintain a pollution degree 1 environment around the drive.

Enclosures should be made from a thermally conductive material.

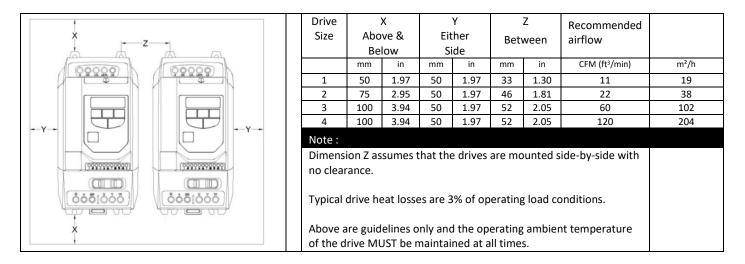

Ensure the minimum air gap clearances around the drive as shown below are observed when mounting the drive.

Where ventilated enclosures are used, there should be venting above the drive and below the drive to ensure good air circulation. Air should be drawn in below the drive and expelled above the drive.

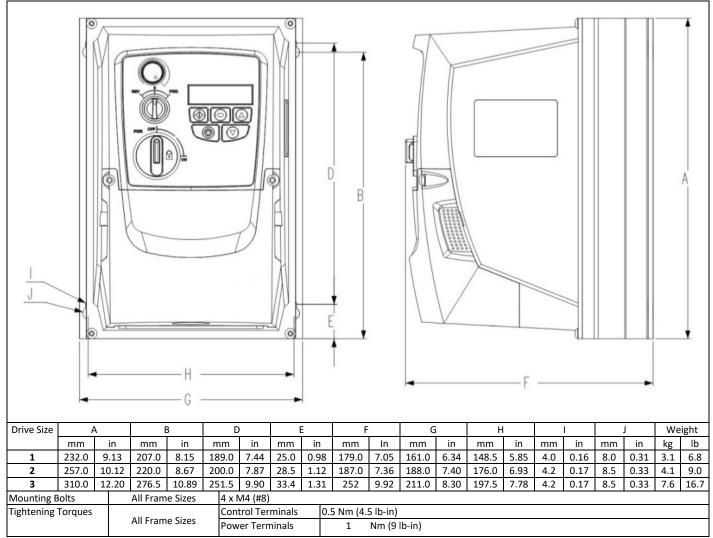

In any environments where the conditions require it, the enclosure must be designed to protect the escodrives against ingress of airborne dust, corrosive gases or liquids, conductive contaminants (such as condensation, carbon dust, and metallic particles) and sprays or splashing water from all directions.

High moisture, salt or chemical content environments should use a suitably sealed (non-vented) enclosure.

The enclosure design and layout should ensure that the adequate ventilation paths and clearances are left to allow air to circulate through the drive heatsink. **esco**drives recommends the following minimum sizes for drives mounted in non-ventilated metallic enclosures:

3.5. Mechanical Dimensions – IP66 (Nema 4X) Enclosed Units

3.6. Guidelines for mounting (IP66 Units)

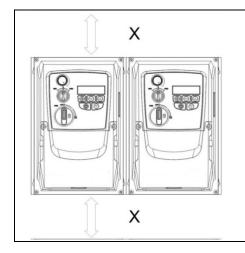

Before mounting the drive, ensure that the chosen location meets the environmental condition requirements for the drive shown in section 9.1 The drive must be mounted vertically, on a suitable flat surface

The minimum mounting clearances as shown in the table below must be observed

The mounting site and chosen mountings should be sufficient to support the weight of the drives

Using the drive as a template, or the dimensions shown above, mark the locations required for drilling

Suitable cable glands to maintain the ingress protection of the drive are required. Gland holes for power and motor cables are pre-moulded into the drive enclosure, recommended gland sizes are shown above. Gland holes for control cables may be cut as required.

Drive Size	X Above	e & Below	Y Eit	her Side	
	mm in		mm	in	
1	200	7.87	10	0.39	
2	200	7.87	10	0.39	
3	200	7.87	10	0.39	
	Note				

Typical drive heat losses are approximately 3% of operating load conditions.

Above are guidelines only and the operating ambient temperature of the drive MUST be maintained at all times.

Cable Gland Sizes					
Drive Size	Power Cable	Motor Cable	Control Cables		
1	M20 (PG13.5)	M20 (PG13.5)	M20 (PG13.5)		
2	M25 (PG21)	M25 (PG21)	M20 (PG13.5)		
3	M25 (PG21)	M25 (PG21)	M20 (PG13.5)		

3.7. Gland Plate and Lock Off

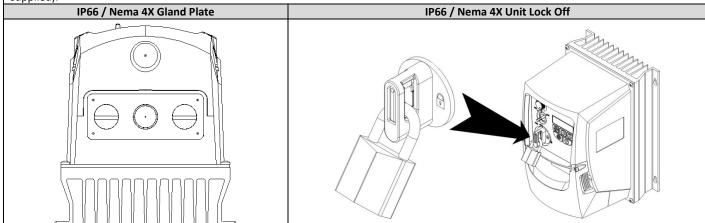

The use of a suitable gland system is required to maintain the appropriate IP / Nema rating. The gland plate has pre moulded cable entry holes for power and motor connections suitable for use with glands as shown in the following table. Where additional holes are required, these can be drilled to suitable size. Please take care when drilling to avoid leaving any particles within the product.

	Power & Motor Cables			Control & Signal Cables			
	Moulded Hole Size	Imperial Gland	Metric Gland	Knockout Size	Imperial Gland	Metric Gland	
Size 1	22mm	PG13.5	M20	22mm	PG13.5	M20	
Size 2 & 3	27mm	PG21	M25	22mm	PG13.5	M20	
Flexible Conduit Hole Sizes:							
		Drill S	ize	Trade Siz	ze	Metric	
Size 1		28mm		¾ in		21	
Size 2 & 3		35mm		1 in		27	
 UL rated ingress protection ("Type") is only met when cables are installed using a UL recognized bushing or fitting for a flexible-conduit system which meets the required level of protection ("Type") For conduit installations the conduit entry holes require standard opening to the required sizes specified per the NEC 							

• Not intended for installation using rigid conduit system

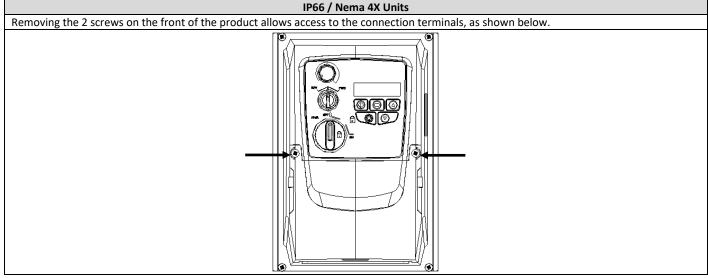

Power Isolator Lock Off

On the switched models the main power isolator switch can be locked in the 'Off' position using a 20mm standard shackle padlock (not supplied).

3.8. Removing the Terminal Cover

To access the connection terminals, the drive front cover needs to be removed as shown.

3.9. Routine Maintenance

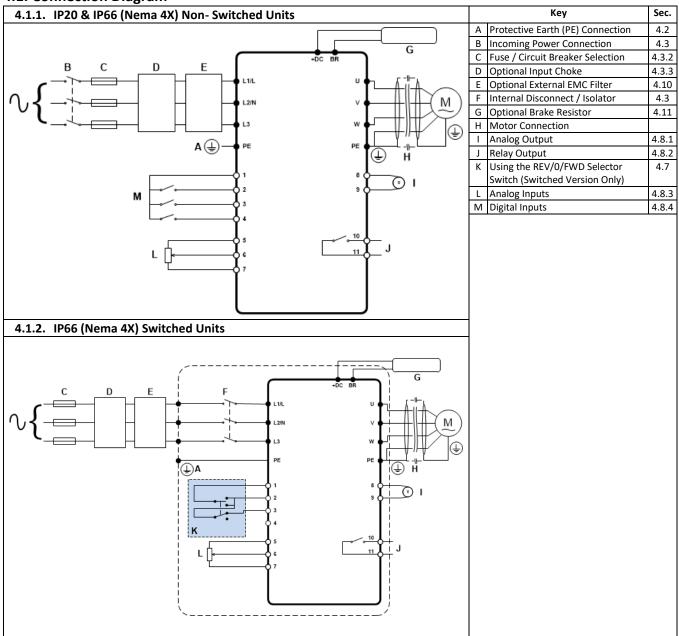

The drive should be included within the scheduled maintenance program so that the installation maintains a suitable operating environment, this should include:

- Ambient temperature is at or below that set out in the "Environment" section.
- Heat sink fans freely rotating and dust free.
- The Enclosure in which the drive is installed should be free from dust and condensation; furthermore ventilation fans and air filters should be checked for correct air flow.

Checks should also be made on all electrical connections, ensuring screw terminals are correctly torqued; and that power cables have no signs of heat damage.

4. Power & Control Wiring

4.1. Connection Diagram

4.2. Protective Earth (PE) Connection

Grounding Guidelines

The ground terminal of each **esco**drives should be individually connected DIRECTLY to the site ground bus bar (through the filter if installed). **esco**drives ground connections should not loop from one drive to another, or to, or from any other equipment. Ground loop impedance must confirm to local industrial safety regulations. To meet UL regulations, UL approved ring crimp terminals should be used for all ground wiring connections.

The drive Safety Ground must be connected to system ground. Ground impedance must conform to the requirements of national and local industrial safety regulations and/or electrical codes. The integrity of all ground connections should be checked periodically. Protective Earth Conductor

The Cross sectional area of the PE Conductor must be at least equal to that of the incoming supply conductor.

Safety Ground

This is the safety ground for the drive that is required by code. One of these points must be connected to adjacent building steel (girder, joist), a floor ground rod, or bus bar. Grounding points must comply with national and local industrial safety regulations and/or electrical codes.

Motor Ground

The motor ground must be connected to one of the ground terminals on the drive.

Ground Fault Monitoring

As with all inverters, a leakage current to earth can exist. The **esco***drives* is designed to produce the minimum possible leakage current whilst complying with worldwide standards. The level of current is affected by motor cable length and type, the effective switching frequency, the earth connections used and the type of RFI filter installed. If an ELCB (Earth Leakage Circuit Breaker) is to be used, the following conditions apply:

- A Type B Device must be used
- The device must be suitable for protecting equipment with a DC component in the leakage current
- Individual ELCBs should be used for each **esco**drives

Shield Termination (Cable Screen)

The safety ground terminal provides a grounding point for the motor cable shield. The motor cable shield connected to this terminal (drive end) should also be connected to the motor frame (motor end). Use a shield terminating or EMI clamp to connect the shield to the safety ground terminal.

4.3. Incoming Power Connection

4.3.1. Cable Selection

- For 1 phase supply, the mains power cables should be connected to L1/L, L2/N.
- For 3 phase supplies, the mains power cables should be connected to L1, L2, and L3. Phase sequence is not important.
- For compliance with CE and C Tick EMC requirements, refer to section 4.10 EMC Compliant Installation.
- A fixed installation is required according to IEC61800-5-1 with a suitable disconnecting device installed between the escodrives and the AC Power Source. The disconnecting device must conform to the local safety code / regulations (e.g. within Europe, EN60204-1, Safety of machinery).
- The cables should be dimensioned according to any local codes or regulations. Maximum dimensions are given in section 9.2.

4.3.2. Fuse / Circuit Breaker Selection

Suitable fuses to provide wiring protection of the input power cable should be installed in the incoming supply line, according to the data in section 0

- Rating Tables. The fuses must comply with any local codes or regulations in place. In general, type gG (IEC 60269) or UL type J fuses are suitable; however in some cases type aR fuses may be required. The operating time of the fuses must be below 0.5 seconds.
- Where allowed by local regulations, suitably dimensioned type B MCB circuit breakers of equivalent rating may be utilised in place of fuses, providing that the clearing capacity is sufficient for the installation.
- The maximum permissible short circuit current at the escodrives Power terminals as defined in IEC60439-1 is 100kA.

4.3.3. Optional Input Choke

- An optional Input Choke is recommended to be installed in the supply line for drives where any of the following conditions occur:-
- \circ $\;$ The incoming supply impedance is low or the fault level / short circuit current is high
- o The supply is prone to dips or brown outs
- An imbalance exists on the supply (3 phase drives)
- o The power supply to the drive is via a busbar and brush gear system (typically overhead Cranes).
- In all other installations, an input choke is recommended to ensure protection of the drive against power supply faults.

4.4. Motor Connection

- The drive inherently produces fast switching of the output voltage (PWM) to the motor compared to the mains supply, for motors which have been wound for operation with a variable speed drive then there is no preventative measures required, however if the quality of insulation is unknown then the motor manufacturer should be consulted and preventative measures may be required.
- The motor should be connected to the **esco**drives U, V, and W terminals using a suitable 3 or 4 core cable. Where a 3 core cable is utilised, with the shield operating as an earth conductor, the shield must have a cross sectional area at least equal to the phase conductors when they are made from the same material. Where a 4 core cable is utilised, the earth conductor must be of at least equal cross sectional area and manufactured from the same material as the phase conductors.
- The motor earth must be connected to one of the **esco**drives earth terminals.
- Maximum permitted motor cable length for all models: 100 metres shielded, 150 metres unshielded.

4.5. Motor Terminal Box Connections

Most general purpose motors are wound for operation on dual voltage supplies. This is indicated on the nameplate of the motor. This operational voltage is normally selected when installing the motor by selecting either STAR or DELTA connection. STAR always gives the higher of the two voltage ratings.

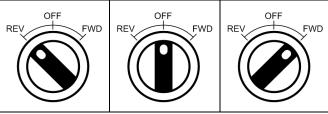

Incoming Supply Voltage	Motor Nameplate Voltages		Connection
230	230 / 400	Delta	
400	400 / 690		
400	230 / 400	Star	

4.6. Control Terminal Wiring

- All analog signal cables should be suitably shielded. Twisted pair cables are recommended.
- Power and Control Signal cables should be routed separately where possible, and must not be routed parallel to each other.
- Signal levels of different voltages e.g. 24 Volt DC and 110 Volt AC, should not be routed in the same cable.
- Maximum control terminal tightening torque is 0.5Nm.
- Control Cable entry conductor size: 0.05 2.5mm² / 30 12 AWG.

4.7. Using the REV/0/FWD Selector Switch (Switched Version Only)

By adjusting the parameter settings the **esco***drives* can be configured for multiple applications and not just for Forward or Reverse. This could typically be for Hand/Off/Auto applications (also known and Local/Remote) for HVAC and pumping industries.

	Switch Position			eters to Set	Notes	
			P-12	P-15		
Run Reverse	STOP	Run Forward	0	0	Factory Default Configuration Run Forward or Reverse with speed controlled from the Local Potentiometer.	
STOP	STOP	Run Forward	0	5,7	Run forward with speed controlled form the local Potentiometer. Run Reverse - disabled	
Preset Speed 1	STOP	Run Forward	0	1	Run Forward with speed controlled from the Local Potentiometer. Preset Speed 1 provides a 'Jog' Speed set in P-20.	
Run Reverse	STOP	Run Forward	0	6, 8	Run Forward or Reverse with speed controlled from the Local Potentiometer.	
Run in Auto	STOP	Run in Hand	0	4	Run in Hand – Speed controlled from the Local Potentiometer. Run in Auto 0 Speed controlled using Analog input 2 e.g. from PLC with 4-20mA signal.	
Run in Speed Control	STOP	Run in PI Control	5	1	In Speed Control the speed is controlled from the Local Potentiometer. In PI Control, Local Potentiometer controls PI set point.	
Run in Preset Speed Control	STOP	Run in PI Control	5	0, 2, 4,5, 812	In Preset Speed Control, P-20 sets the Preset Speed In PI Control, Potentiometer can control the PI set point (P-44=1)	
Run in Hand	STOP	Run in Auto	3	6	Hand – speed controlled from the Local Potentiometer. Auto – Speed Reference from Modbus.	
Run in Hand	STOP	Run in Auto	3	3	Hand – Speed reference from Preset Speed 1 (P-20). Auto – Speed Reference from Modbus.	

NOTE To be able to adjust parameter P-15, extended menu access must be set in P-14 (default value is 101)

4.8. Control Terminal Connections

Default Connections	Control Terminal	Signal	Description		
			+24Vdc user output, 100mA.		
	1	+24Vdc User Output	Do not connect an this terminal.	external voltage source to	
	2	Digital Input 1	Positive logic "Logic 1" input voltage range: 8V 30V DC "Logic 0" input voltage range: 0V 4V DC Digital: 8 to 30V Analog: 0 to 10V, 0 to 20mA or 4 to 20mA		
	3	Digital Input 2			
	4	Digital Input 3 / Analog Input 2			
5	5	+10V User Output	+10V, 10mA, 1kΩ minimum		
	6	Analog Input 1 / Digital Input 4	Analog: 0 to 10V, 0 to 20mA or 4 to 20mA Digital: 8 to 30V		
	7	0V	0 Volt Common, internally co	onnected to terminal 9	
(v) 9	8	Analog Output / Digital Output	Analog: 0 to 10V, Digital: 0 to 24V	20mA maximum	
	9	0V	0 Volt Common, internally co	onnected to terminal 7	
	10	Relay Common			
	11	Relay [NO] Contact	Contact 250Vac, 6A / 30Vdc,	5A	

4.8.1. Analog Output

The analog output function may be configured using parameter P-25, which is described in section 0 Extended Parameters.

The output has two operating modes, dependent on the parameter selection.

- Analog Mode
 - The output is a 0 10 volt DC signal, 20mA max load current
 - Digital Mode
 - The output is 24 volt DC, 20mA max load current

4.8.2. Relay Output

The relay output function may be configured using parameter P-18, which is described in section 0

Extended Parameters.

4.8.3. Analog Inputs

Two analog inputs are available, which may also be used as Digital Inputs if required. The signal formats are selected by parameters as follows

- Analog Input 1 Format Selection Parameter P-16
- Analog Input 2 Format Selection Parameter P-47

These parameters are described more fully in section 0

Extended Parameters.

The function of the analog input, e.g. for speed reference or PI feedback for example is defined by parameters P-15. The function of these parameters and available options is described in section 7 Analog and Digital Input Macro Configurations.

4.8.4. Digital Inputs

Up to four digital inputs are available. The function of the inputs is defined by parameters P-12 and P-15, which are explained in section 7 Analog and Digital Input Macro Configurations.

4.9. Motor Thermal overload Protection

4.9.1. Internal Thermal Overload Protection

The drive has an in-built motor thermal overload function; this is in the form of an "*I_t-t-P*" trip after delivering 100% of the value set in P-08 for a sustained period of time (e.g. 150% for 60 seconds).

4.9.2. Motor Thermistor Connection

Where a motor thermistor is to be used, it should be connected as follows:

Cor	ntrol Ter	minal S	trip	Additional Information
	2	3		 Compatible Thermistor : PTC Type, 2.5kΩ trip level Use a setting of P-15 that has Input 3 function as External Trip, e.g. P-15 = 3. Refer to section 7 for further details. Set P-47 = "Ptc-th"

4.10. EMC Compliant Installation

Category	Supply Cable Type	Motor Cable Type	Control Cables	Maximum Permissible Motor Cable Length
C1 ⁶	Shielded ¹	Shielded ^{1,5}	Chielded4	1M / 5M ⁷
C2	Shielded ²	Shielded ^{1, 5}	Shielded ⁴	5M / 25M ⁷
C3	Unshielded ³	Shielded ²		25M / 100M ⁷

1/ A screened (shielded) cable suitable for fixed installation with the relevant mains voltage in use. Braided or twisted type screened cable where the screen covers at least 85% of the cable surface area, designed with low impedance to HF signals. Installation of a standard cable within a suitable steel or copper tube is also acceptable.

2/ A cable suitable for fixed installation with relevant mains voltage with a concentric protection wire. Installation of a standard cable within a suitable steel or copper tube is also acceptable.

3/ A cable suitable for fixed installation with relevant mains voltage. A shielded type cable is not necessary.

4/ A shielded cable with low impedance shield. Twisted pair cable is recommended for analog signals.

5/ The cable screen should be terminated at the motor end using an EMC type gland allowing connection to the motor body through the largest possible surface area. Where drives are mounted in a steel control panel enclosure, the cable screen may be terminated directly to the control panel using a suitable EMC clamp or gland, as close to the drive as possible. For IP66 drives, connect the motor cable screen to the internal ground clamp.

6/ Compliance with category C1 conducted emissions only is achieved. For compliance with category C1 radiated emissions, additional measures may be required, contact your Sales Partner for further assistance.

7/ Permissible cable length with additional external EMC filter

4.11. Optional Brake Resistor

escodrives S3 Frame Size 2 and above units have a built in Brake Transistor. This allows an external resistor to be connected to the drive to provide improved braking torque in applications that require this.

The brake resistor should be connected to the "+" and "BR" terminals as shown.

The voltage level at these terminals may exceed 800VDC

Stored charge may be present after disconnecting the mains power

Allow a minimum of 10 minutes discharge after power off before attempting any connection to these terminals

Suitable resistors and guidance on selection can be obtained from your escodrives Sales Partner.

5. Operation

5.1. Managing the Keypad

The drive is configured and its operation monitored via the keypad and display.

\bigcirc	NAVIGATE	Used to display real-time information, to access and exit parameter edit mode and to store parameter changes	
\square	UP	Used to increase speed in real-time mode or to increase parameter values in parameter edit mode	
\bigtriangledown	DOWN	Used to decrease speed in real-time mode or to decrease parameter values in parameter edit mode	
	RESET / STOP	Used to reset a tripped drive. When in Keypad mode is used to Stop a running drive.	
\Diamond	START	When in keypad mode, used to Start a stopped drive or to reverse the direction of rotation if bi-directional keypad mode is enabled	

5.2. Operating	Displays	5.3. Changing	Parameters	5.4. Read Only Access	Parameter	5.5. Resetting	Parameters

escodrives S3 User Guide Revision 1.20

Par.	Description	Minimum	Maximum	Default	Units						
P-25	Analog Output Function Select	0	11	8	-						
	Digital Output Mode. Logic 1 = +24V DC										
	0: Drive Enabled (Running). Logic 1 when the escodrives is enabled (Running)										
	1: Drive Healthy. Logic 1 When no Fault condition exists on the drive										
	2: At Target Frequency (Speed). Logic 1 when the output frequency matches the setpoint frequency										
	3: Drive Tripped. Logic 1 when the drive is in a fault condition										
	4: Output Frequency >= Limit. Logic 1 when the output frequency exceeds the	-									
	5: Output Current >= Limit. Logic 1 when the motor current exceeds the adjus										
	 6: Output Frequency < Limit. Logic 1 when the output frequency is below the a 7: Output Current < Limit. Logic 1 when the motor current is below the adjust 	-									
	Analog Output Mode	able infint set in	111-19								
	8: Output Frequency (Motor Speed). 0 to P-01, resolution 0.1Hz										
	9: Output (Motor) Current. 0 to 200% of P-08, resolution 0.1A										
	10: Output Power . 0 – 200% of drive rated power										
	11: Load Current. 0 – 200% of P-08, resolution 0.1A										
P-26	Skip frequency hysteresis band	0.0	P-01	0.0	Hz / RPM						
P-27	Skip Frequency Centre Point	0.0	P-01	0.0	Hz / RPM						
	The Skip Frequency function is used to avoid the esco drives operating at a cer	rtain output fr	equency, for e	xample at a fr	requency						
	which causes mechanical resonance in a particular machine. Parameter P-27 d										
	is used in conjunction with P-26. The esco drives s output frequency will ramp										
	P-04 respectively, and will not hold any output frequency within the defined band. If the frequency reference applied to the drive is										
	within the band, the escodrives output frequency will remain at the upper or	lower limit of	the band.								
P-28	V/F Characteristic Adjustment Voltage	0	P-07	0	V						
P-29	V/F Characteristic Adjustment Frequency	0.0	P-09	0.0	Hz						
	This parameter in conjunction with P-28 sets a frequency point at which the vo	oltage set in P-	29 is applied t	o the motor.	Care must be						
	taken to avoid overheating and damaging the motor when using this feature.										
P-30	Start Mode, Automatic Restart, Fire Mode Operation										
	Index 1 : Start Mode & Automatic Restart	N/A	N/A	Edge-r	-						
	Selects whether the drive should start automatically if the enable input is pres	ent and latche	Selects whether the drive should start automatically if the enable input is present and latched during power on. Also configures the								
	Automatic Restart function.

Par.	Description	Minimum	Maximum	Default	Units
P-33	Speed Search	0	2	0	-
	0 : Disabled	Ŭ	_	J.	
	1: Enabled. When enabled, on start up the drive will attempt to determine if the	he motor is alr	eady rotating,	and will begin	to control
	the motor from its current speed. A short delay may be observed when startin			-	
	2: Enabled on Trip, Brown Out or Coast Stop. Speed search is only activated for	ollowing the ev	vents listed, ot	herwise it is d	isabled.
P-34	Brake Chopper Enable (Not Size 1)	0	4	0	-
	0 : Disabled				
	1: Enabled With Software Protection. Brake chopper enabled with software p				
	2: Enabled Without Software Protection. Enables the internal brake chopper v	without softwa	are protection	. An external t	hermal
	protection device should be fitted.		la al alcuntos acada		
	3: Enabled With Software Protection. As setting 1, however the Brake Choppe	er is only enabl	ied during a cr	lange of the fr	equency
	setpoint, and is disabled during constant speed operation. 4: Enabled Without Software Protection. As setting 2, however the Brake Cho	nner is only er	abled during	a change of th	e frequency
	setpoint, and is disabled during constant speed operation.	ipper is only er	abled during		enequency
P-35	Analog Input 1 Scaling / Slave Speed Scaling	0.0	2000.0	100.0	%
	Analog Input 1 Scaling. The analog input signal level is multiplied by this factor				-
	factor is set to 200.0%, a 5 volt input will result in the drive running at maximu				
	Slave Speed Scaling. When operating in Slave Mode (P-12 = 9), the operating s			Master speed	l multiplied
	by this factor, limited by the minimum and maximum speeds.				
P-36	Serial Communications Configuration (CANopen / Modbus RTU)		See I	Below	
	Index 1 : Address	0	63	1	-
	Index 2 : Baud Rate	9.6	1000	115.2	kbps
	Index 3 : Communication loss protection	0	3000	t 3000	ms
	This parameter has three sub settings used to configure the Modbus RTU Seria	al Communicat	ions. The Sub	Parameters ar	e
	1st Index : Drive Address : Range : 0 – 63, default : 1				
	2 nd Index: Baud Rate & Network type: Selects the baud rate and network type	e for the intern	ial RS485 comi	munication po	rt.
	For Modbus RTU: Baud rates 9.6, 19.2, 38.4, 57.6, 115.2 kbps are available.				
	For CANopen: Baud rates 125, 250, 500 & 1000 kbps are available.				
	3 rd Index: Watchdog Timeout : Defines the time for which the drive will operat Register 1 (Drive Control Word) after the drive has been enabled. Setting 0 disc				
	1000, or 3000 defines the time limit in milliseconds for operation. A ' \mathbf{t} ' suffix s		-	-	
	means that the drive will coast stop (output immediately disabled) but will not	•			Sullix
P-37	Access Code Definition	0	9999	101	-
	Defines the access code which must be entered in P-14 to access parameters a	-	0000		
P-38	Parameter Access Lock	0	1	0	-
	0: Unlocked. All parameters can be accessed and changed				
	1: Locked. Parameter values can be displayed, but cannot be changed except F	P-38.			
P-39	Analog Input 1 Offset	-500.0	500.0	0.0	%
	Sets an offset, as a percentage of the full scale range of the input, which is app	lied to the ana	alog input sign	al. This param	eter operates
	in conjunction with P-35, and the resultant value can be displayed in P00-01.				
	The resultant value is defined as a percentage, according to the following :-				
P-40	P00-01 = (Applied Signal Level(%) - P-39) x P-35)	0.000	16.000	0.000	
P-40	Index 1 : Display Scaling Factor Index 2 : Display Scaling Source	0.000	16.000 3	0.000	-
	Allows the user to program the esco drives	0	5	0	
	to display an alternative output unit scaled from either output frequency (Hz).	Motor Speed	(RPM) or the	signal level of	PI feedback
	when operating in PI Mode.	, wotor speca	(in inj or the	Signal level of	Trecubuck
	Index 1: Sets the scaling multiplier. The chosen source value is multiplied by th	nis factor.			
	Index 2 : Defines the scaling source as follows :-				
	0: Motor Speed. Scaling is applied to the output frequency if P-10 = 0, or moto	or RPM if P-10	> 0.		
	1: Motor Current. Scaling is applied to the motor current value (Amps)				
	2: Analog Input 2 Signal Level. Scaling is applied to analog input 2 signal level,				
	3: PI Feedback. Scaling is applied to the PI feedback selected by P-46, internall				
P-41	PI Controller Proportional Gain	0.0	30.0	1.0	-
	PI Controller Proportional Gain. Higher values provide a greater change in the	drive output fi	requency in re	sponse to sma	Il changes in
P-42	the feedback signal. Too high a value can cause instability PI Controller Integral Time	0.0	30.0	1.0	S
F-42	PI Controller Integral Time. Larger values provide a more damped response for			-	
P-43	PI Controller Operating Mode		1	0	
	0: Direct Operation . Use this mode if when the feedback signal drops, the mot	or speed shou		0	
	1: Inverse Operation . Use this mode if when the feedback signal drops, the model is the second signal drops, the model is the second signal drops and the second				
	2: Direct Operation, Wake at Full Speed. As setting 0, but on restart from Star				
	3: Inverse Operation, Wake at Full Speed. As setting 1, but on restart from Sta				
P-44	PI Reference (Setpoint) Source Select	0	1	0	-
	Selects the source for the PID Reference / Setpoint				
	0: Digital Preset Setpoint. P-45 is used				
	1: Analog Input 1 Setpoint. Analog input 1 signal level, readable in P00-01 is us				
P-45	PI Digital Setpoint	0.0	100.0	0.0	%

Par.	Description	Minimum	Maximum	Default	Units				
	When P-44 = 0, this parameter sets the preset digital reference (setpoint) used	d for the PI Co	ntroller as a %	of the feedba	ck signal.				
P-46	PI Feedback Source Select	0	5	0	-				
	Selects the source of the feedback signal to be used by the PI controller.								
	0: Analog Input 2 (Terminal 4) Signal level readable in P00-02. 1 : Analog Input 1 (Terminal 6) Signal level readable in P00-01 2: Motor Current. Scaled as % of P-08.								
	3 : DC Bus Voltage Scaled 0 – 1000 Volts = 0 – 100%								
	4: Analog 1 – Analog 2. The value of Analog Input 2 is subtracted from Analog	1 to give a diff	erential signal	l. The value is l	imited to 0.				
	5: Largest (Analog 1, Analog 2). The larger of the two analog input values is al	ways used for	PI feedback.						
P-47	Analog Input 2 Signal Format	-	-	-	U0-10				
	U D- ID = 0 to 10 Volt Signal								
	A D-2D = 0 to 20mA Signal								
	E 4-20 = 4 to 20mA Signal, the esco drives will trip and show the fault code ^L	I-20F if the sig	gnal level falls	below 3mA					
	r 4-20 = 4 to 20mA Signal, the escodrives will run at Preset Speed 1 (P-20) if	f the signal lev	el falls below 3	3mA					
	E 20-4 = 20 to 4mA Signal, the esco drives will trip and show the fault code 4-20F if the signal level falls below 3mA								
	r 20-4 = 20 to 4mA Signal, the esco <i>drives</i> will run at Preset Speed 1 (P-20) if the signal level falls below 3mA								
		-							
	r 20-4 = 20 to 4mA Signal, the escodrives will run at Preset Speed 1 (P-20) i	if the signal lev	el falls below	3mA	Ω, reset 1kΩ				
P-48		if the signal lev	el falls below	3mA	Ω, reset 1kΩ s				
P-48	 r 20-4 = 20 to 4mA Signal, the escodrives will run at Preset Speed 1 (P-20) if PEc-Eh = Use for motor thermistor measurement, valid with any setting of P-3 Standby Mode Timer 	if the signal lev 15 that has Inp 0.0	rel falls below out 3 as E-Trip. 25.0	3mA Trip level : 3k 0.0	S

6.3. Advanced Parameters

Par.	Description	Minimum	Maximum	Default	Units				
P-51	Motor Control Mode	0	5	0	-				
	0: Vector speed control mode								
	1: V/f mode								
	2: PM motor vector speed control								
	3: BLDC motor vector speed control								
	4: Synchronous Reluctance motor vector speed control								
	5: LSPM motor vector speed control								
P-52	Motor Parameter Autotuning	0	1	0	-				
	0 : Disabled								
	1: Enabled. When enabled, the drive immediately measures required data from	m the motor f	or optimal ope	ration. Ensure	all motor				
	related parameters are correctly set first before enabling this parameter.								
	This parameter can be used to optimise the performance when $P-51 = 0$.								
	Autotuning is not required if P-51 = 1.								
	For settings 2 – 5 of P-51, autotuning <u>MUST</u> be carried out <u>AFTER</u> all other req				- 1				
P-53	Vector Mode Gain	0.0	200.0	50.0	%				
	Single Parameter for Vector speed loop tuning. Affects P & I terms simultaneo	-			- (
P-54	Maximum Current Limit	0.0	175.0	150.0	%				
	Defines the max current limit in vector control modes				-				
P-55	Motor Stator Resistance	0.00	655.35	-	Ω				
	Motor stator resistance in Ohms. Determined by Autotuning, adjustment is no	1							
P-56	Motor Stator d-axis Inductance (Lsd)	0	6553.5	-	mH				
	Determined by Autotuning, adjustment is not normally required.								
P-57	Motor Stator q-axis Inductance (Lsq)	0	6553.5	-	mH				
	Determined by Autotuning, adjustment is not normally required.								
P-58	DC Injection Speed	0.0	P-01	0.0	Hz / RPM				
	Sets the speed at which DC injection current is applied during braking to Stop, allowing DC to be injected before the drive reaches								
	zero speed if desired.								
P-59	DC Injection Current	0.0	100.0	20.0	%				
	Sets the level of DC injection braking current applied according to the conditions set in P-32 and P-58.								
P-60	Motor Overload Management	-	-	-	-				
	Index 1 : Thermal Overload Retention	0	1	0	1				
	0 : Disabled								
	1: Enabled. When enabled, the drive calculated motor overload protection inf	ormation is re	tained after th	e mains powe	r is				
	removed from the drive.								
	Index 2 : Thermal Overload Limit Reaction	0	1	0	1				
	0: It.trp. When the overload accumulator reaches the limit, the drive will trip of	_							

1: Current Limit Reduction. When the overload accumulator reaches 90% of, the output current limit is internally reduced to 100% of P-08 in order to avoid an *I L_LrP*. The current limit will return to the setting in P-54 when the overload accumulator reaches 10%

6.4. P-00 Read Only Status Parameters

i		- · ·
Par.	Description	Explanation
P00-01	1 st Analog input value (%)	100% = max input voltage
P00-02	2 nd Analog input value (%)	100% = max input voltage
P00-03	Speed reference input (Hz / RPM)	Displayed in Hz if P-10 = 0, otherwise RPM
P00-04	Digital input status	Drive digital input status
P00-05	User PI output (%)	Displays value of the User PI output
P00-06	DC bus ripple (V)	Measured DC bus ripple
P00-07	Applied motor voltage (V)	Value of RMS voltage applied to motor
P00-08	DC bus voltage (V)	Internal DC bus voltage
P00-09	Heatsink temperature (°C)	Temperature of heatsink in °C
P00-10	Run time since date of manuf. (Hours)	Not affected by resetting factory default parameters
P00-11	Run time since last trip (1) (Hours)	Run-time clock stopped by drive disable (or trip), reset on next enable only if a trip occurred. Reset also on next enable after a drive power down.
P00-12	Run time since last trip (2) (Hours)	Run-time clock stopped by drive disable (or trip), reset on next enable only if a trip occurred (under-volts not considered a trip) – not reset by power down / power up cycling unless a trip occurred prior to power down
P00-13	Trip Log	Displays most recent 4 trips with time stamp
	Run time since last disable (Hours)	Run-time clock stopped on drive disable, value reset on next enable
	DC bus voltage log (V)	8 most recent values prior to trip, 256ms sample time
	Heatsink temperature log (°C)	8 most recent values prior to trip, 30s sample time
	Motor current log (A)	8 most recent values prior to trip, 256ms sample time
	DC bus ripple log (V)	8 most recent values prior to trip, 22ms sample time
P00-19	Internal drive temperature log (°C)	8 most recent values prior to trip, 30 s sample time
P00-20	Internal drive temperature (°C)	Actual internal ambient temperature in °C
	CANopen process data input	Incoming process data (RX PDO1) for CANopen: PI1, PI2, PI3, PI4
	CANopen process data output	outgoing process data (TX PDO1) for CANopen: PO1, PO2, PO3, PO4
P00-23	Accumulated time with heatsink > 85°C	Total accumulated hours and minutes of operation above heatsink temp of 85°C
	(Hours)	
P00-24	Accumulated time with drive internal temp > 80°C (Hours)	Total accumulated hours and minutes of operation with drive internal ambient above 80C
	Estimated rotor speed (Hz)	In vector control modes, estimated rotor speed in Hz
P00-26	kWh meter / MWh meter	Total number of kWh / MWh consumed by the drive.
P00-27	Total run time of drive fans (Hours)	Time displayed in hh:mm:ss. First value displays time in hrs, press up to display mm:ss
P00-28	Software version and checksum	Version number and checksum. "1" on LH side indicates I/O processor, "2" indicates power stage
P00-29	Drive type identifier	Drive rating, drive type and software version codes
P00-30	Drive serial number	Unique drive serial number
P00-31	Motor current ld / lq	Displays the magnetising current (Id) and torque current (Iq). Press UP to show Iq
P00-32	Actual PWM switching frequency (kHz)	Actual switching frequency used by drive
P00-33	Critical fault counter – (🛛– /)	These parameters log the number of times specific faults or errors occur, and are
P00-34	Critical fault counter – (۵- صد ل	useful for diagnostic purposes.
P00-35	Critical fault counter – (الل- المدلح)	
P00-36	Critical fault counter $-(\mathbf{D}-\mathbf{E})$ O-temp (h/sink)	
P00-37	Critical fault counter – (D – b) b O-I (chopper)	
P00-38	Critical fault counter – (D- hERL) (control)	
P00-39	Modbus comms error counter (5C-FD I)	
P00-40	CANbus comms error counter (5C-FD2)	
P00-41	I/O processor comms errors (dRLR-F)	
P00-42	Power stage uC comms errors (P5-E-P)	
P00-43	Drive power up time (life time) (Hours)	Total lifetime of drive with power applied
P00-44	Phase U current offset & ref	Internal value
P00-45	Phase V current offset & ref	Internal value
P00-46	Phase W current offset & ref	Internal value
P00-47	Index 1 : Fire mode total active time	Total activation time of Fire Mode
	Index 2 : Fire Mode Activation Count	Displays the number of times Fire Mode has been activated
P00-48	Scope channel 1 & 2	Displays signals for first scope channels 1 & 2
P00-49	Scope channel 3 & 4	Displays signals for first scope channels 3 & 4

Par.	Description	Explanation
P00-50	Bootloader and motor control	Internal value

7. Analog and Digital Input Macro Configurations

7.1. Overview

escodrives S3 uses a Macro approach to simplify the configuration of the Analog and Digital Inputs. There are two key parameters which determine the input functions and drive behaviour:-

P-12 – Selects the main drive control source and determines how the output frequency of the drive is primarily controlled.

P-15 – Assigns the Macro function to the analog and digital inputs.

Additional parameters can then be used to further adapt the settings, e.g.

P-16 – Used to select the format of the analog signal to be connected to analog input 1, e.g. 0 – 10 Volt, 4 – 20mA

P-30 – Determines whether the drive should automatically start following a power on if the Enable Input is present

P-31 – When Keypad Mode is selected, determines at what output frequency / speed the drive should start following the enable command, and also whether the keypad start key must be pressed or if the Enable input alone should start the drive.

P-47 – Used to select the format of the analog signal to be connected to analog input 2, e.g. 0 – 10 Volt, 4 – 20mA

The diagrams below provide an overview of the functions of each terminal macro function, and a simplified connection diagram for each.

7.2. Macro Functions Guide Key

STOP / RUN	Latched input, Close to Run, Open to Stop
Forward Rotation /Reverse Rotation	Selects the direction of motor operation
All REF	Analog Input 1 is the selected speed reference
P-xx REF	Speed setpoint from the selected preset speed
PR-REF	Preset speeds P-20 – P-23 are used for the speed reference, selected according to other digital input status
^-FAST STOP (P-24)-^	When both inputs are active simultaneously, the drive stops using Fast Stop Ramp Time P-24
E-TRIP	External Trip input, which must be Normally Closed. When the input opens, the drive trips showing
	E-Er P or PEc-Eh depending on P-47 setting
(NO)	Normally Open Contact, Momentarily Close to Start
(NC)	Normally Closed Contact, momentary Open to Stop
Fire Mode	Activates Fire Mode, see section 0
Fire Mode	
ENABLE	Hardware Enable Input. In Keypad Mode, P-31 determines whether the drive immediately starts, or the
	keypad start key must be pressed. In other modes, this input must be present before the start signal via
	the fieldbus interface
INC SPD	Normally Open, Close the input to Increase the motor speed
DEC SPD	Normally Open, Close input to Decrease motor speed
KPD REF	Keypad Speed Reference selected
FB REF	Selected speed reference from Fieldbus (Modbus RTU / CANopen / Master depending on P-12 setting)

7.7. Fire Mode

The Fire Mode function is designed to ensure continuous operation of the drive in emergency conditions until the drive is no longer capable of sustaining operation. The Fire Mode input may be a normally open (Close to Activate Fire Mode) or Normally Closed (Open to Activate Fire Mode) according to the setting of P-30 Index 2. In addition, the input may be momentary or maintained type, selected by P-30 Index 3. This input may be linked to a fire control system to allow maintained operation in emergency conditions, e.g. to clear smoke or maintain air quality within that building.

The fire mode function is enabled when P-15 = 15, 16 or 17, with Digital Input 3 assigned to activate fire mode.

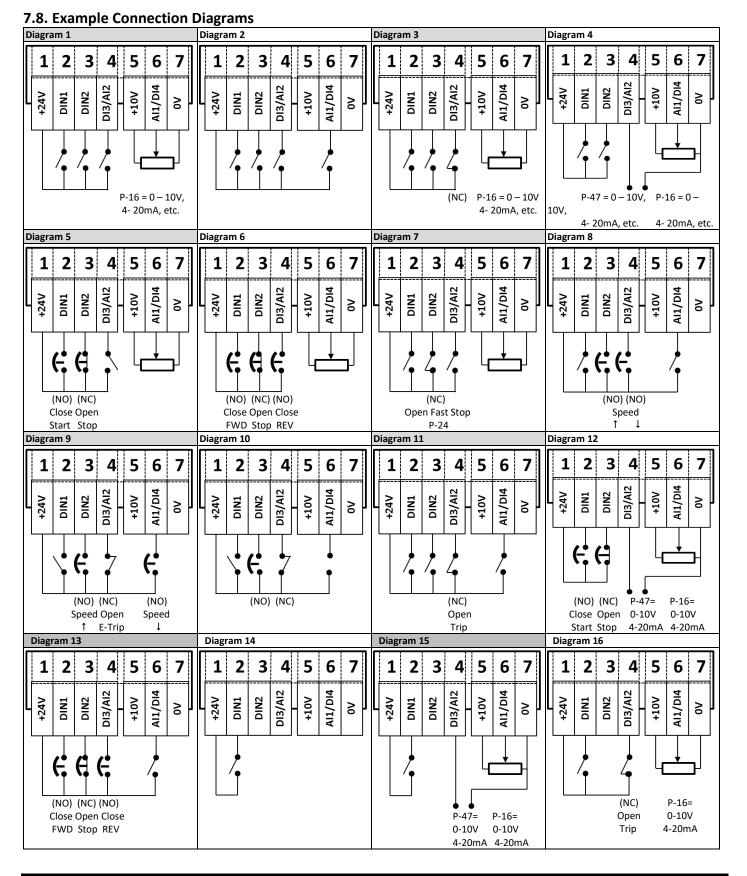

Fire Mode disables the following protection features in the drive:-

O-t (Heat-sink Over-Temperature), U-E (Drive Under Temperature), Eh-FLE (Faulty Thermistor on Heat-sink), E-Er P (External Trip), 4-20 F(4-20mA fault), Ph-I b (Phase Imbalance), P-Lo55 (Input Phase Loss Trip), 5C-ErP (Communications Loss Trip), I_E-ErP (Accumulated overload Trip)

The following faults will result in a drive trip, auto reset and restart:-

D-uolt (Over Voltage on DC Bus), **U-uolt** (Under Voltage on DC Bus), **h D-I** (Fast Over-current Trip), **D-I** (Instantaneous over current on drive output), **DUE-F** (Drive output fault, Output stage trip)

8. Modbus RTU Communications

8.1. Introduction

The escodrives S3 can be connected to a Modbus RTU network via the RJ45 connector on the front of the drive.

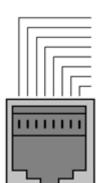

8.2. Modbus RTU Specification

Protocol	Modbus RTU
Error check	CRC
Baud rate	9600bps, 19200bps, 38400bps, 57600bps, 115200bps (default)
Data format	1 start bit, 8 data bits, 1 stop bits, no parity.
Physical signal	RS 485 (2-wire)
User interface	RJ45
Supported Function Codes	03 Read Multiple Holding Registers
	06 Write Single Holding Register
	16 Write Multiple Holding Registers (Supported for registers 1 – 4 only)

8.3. RJ45 Connector Configuration

For full MODBUS RTU register map information please refer to your **esco**drives Sales Partner. Local contacts can be found by visiting our website www.escodrives.com

When using MODBUS control the Analog and Digital Inputs can be configured as shown in section 7.5

0 Volts -RS485 (PC) +RS485 (PC)

CAN -CAN +

4 5

+24 Volt -RS485 (Modbus RTU)

+RS485 (Modbus RTU)

Warning:

This is not an Ethernet connection. Do not connect directly to an Ethernet port.

8.4. Modbus Register Map

Register Number	-		Supported Function Codes			Function		Range	Explanation
			03	06	16	Low Byte	High Byte		
1	-	R/W	~	~	~	Drive Control Command		03	16 Bit Word. Bit 0 : Low = Stop, High = Run Enable Bit 1 : Low = Decel Ramp 1 (P-04), High = Decel Ramp 2 (P-24) Bit 2 : Low = No Function, High = Fault Reset Bit 3 : Low – No Function, High = Coast Stop Request
2	-	R/W	✓	✓	✓	Modbus Speed r	eference setpoint	05000	Setpoint frequency x10, e.g. 100 = 10.0Hz
4	-	R/W	✓	✓	✓	Acceleration and	Deceleration Time	060000	Ramp time in seconds x 100, e.g. 250 = 2.5 seconds
6	-	R	~			Error code	Drive status		Low Byte = Drive Error Code, see section 10.1 High Byte = Drive Status as follows :- 0 : Drive Stopped 1: Drive Running 2: Drive Tripped
7		R	✓			Output Motor Fi	requency	020000	Output frequency in Hz x10, e.g. 100 = 10.0Hz
8		R	✓			Output Motor C	urrent	0480	Output Motor Current in Amps x10, e.g. 10 = 1.0 Amps
11	-	R	~			Digital input stat	tus	015	Indicates the status of the 4 digital inputs Lowest Bit = 1 Input 1
20	P00-01	R	~			Analog Input 1 v	alue	01000	Analog input % of full scale x10, e.g. 1000 = 100%
21	P00-02	R	✓			Analog Input 2 v	alue	01000	Analog input % of full scale x10, e.g. 1000 = 100%
22	P00-03	R	~			Speed Reference Value		01000	Displays the setpoint frequency x10, e.g. 100 = 10.0Hz
23	P00-08	R	~			DC bus voltage		01000	DC Bus Voltage in Volts
24	P00-09	R	~			Drive temperatu	ire	0100	Drive heatsink temperature in ^o C

All user configurable parameters are accessible as Holding Registers, and can be Read from or Written to using the appropriate Modbus command. The Register number for each parameter P-04 to P-60 is defined as 128 + Parameter number, e.g. for parameter P-15, the register number is 128 + 15 = 143. Internal scaling is used on some parameters, for further details please contact your **esco**drives Sales Partner.

9. Technical Data

9.1. Environmental

Operational ambient temperature range	Open Drives
	- I I - I

Opera	tional ambient temperature range	Open Drives	:	-10 50°C (frost and condensation free)
		Enclosed Drives	:	-10 40°C (frost and condensation free)
Storag	e ambient temperature range		:	-40 60°C
Maxim	num altitude		:	2000m. Derate above 1000m : 1% / 100m
Maxim	num humidity		:	95%, non-condensing
NOTE	For UL compliance: the average ambier	nt temperature over a	24 hour pe	riod for 200-240V, 2.2kW and 3HP, IP20 drives is 45°C.

9.2. Rating Tables

Frame Size	kW	HP	Input Current	Fuse / I	Fuse / MCB (Type B) Maximum Cable Size		Output Current	Recommended Brake Resistance		
				Non UL	UL	mm	AWG	Α	Ω	
200 - 24	0 (+ / -	10%) V 1 Phas	e Input, 3	B Phase Output

4	15	20	34.2	40	45	16	5	30	30	
4	18.5	25	44.1	50	60	16	5	39	22	
4	22	30	51.9	63	70	16	5	46	22	

Note Cable sizes shown are the maximum possible that may be connected to the drive. Cables should be selected according to local wiring codes or regulations at the point of installation

9.3. Single Phase Operation of Three Phase Drives

All drive models intended for operation from three phase mains power supply may be operated from a single phase supply at up to 50% of maximum rated output current capacity. In this case, the AC power supply should be connected to L1 (L) and L2 (N) power connection terminals only.

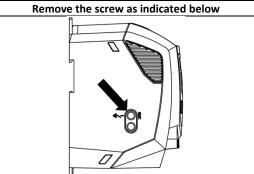

9.4. Additional Information for UL Compliance

esco*drives* S3 is designed to meet the UL requirements. For an up to date list of UL compliant products, please refer to UL listing NMMS.E494838. In order to ensure full compliance, the following must be fully observed.

Supply Voltage	Requirements 200 – 240 RMS Volts for 230 Volt rated units, + /- 10% variation allowed. 240 Volt RMS Maximum					
	380 – 480 Volts for 400 Volt rated units, + / - 10% variation allowed, Maximum 500 Volts RMS					
Imbalance	Maximum 3% voltage variation between phase – phase voltages allowed					
				balance of > 3% will result in the drive trippin		
	For input supplies which have supply imbalance greater than 3% (typically the Indian sub- continent & parts of Asia					
	Pacific including China) esco antriebstechnik gmbh recommends the installation of input line reactors.					
Frequency	50 – 60Hz + / - 5% Variation	-		·		
Short Circuit Capacity	Voltage Rating	Min kW (HP)	Max kW (HP)	Maximum supply short-circuit current		
. ,	115V	0.37 (0.5)	1.1 (1.5)	100kA rms (AC)		
	230V	0.37 (0.5)	11 (15)	100kA rms (AC)		
	400 / 460V	0.75 (1)	22 (30)	100kA rms (AC)		
	All the drives in the above table are suitable for use on a circuit capable of delivering not more than the above					
	specified maximum short-circuit Amperes symmetrical with the specified maximum supply voltage when protected					
	by Class J fuses.					
Mechanical Installat	ion Requirements					
		allation within contr	olled environments whi	ich meet the condition limits shown in sectio		
9.1						
The drive can be opera	ted within an ambient tempe	erature range as stat	ed in section 9.1			
	ion is required in a pollution					
	ts, installation in a pollution	-				
				tected from 12.7mm (1/2 inch) of deformation		
of the enclosure if the	enclosure impacted.					
Electrical Installation	n Requirements					
	connection must be accordi	ng to section 4.3				
			ata shown in section 0 a	and the National Electrical Code or other		
applicable local codes.		0				
Motor Cable	75°C Copper must be used					
Power cable connection	ns and tightening torques are	e shown in sections	3.3 and 0			
				ircuit protection must be provided in		
accordance with the na	itional electrical code and an	y additional local co	des. Ratings are shown	in section 0		
				ited 480Volt (phase to ground), 480 Volt		
(phase to phase), suital	ble for over voltage category	iii and shall provide	protection for a rated i	mpulse withstand voltage peak of 4kV.		
	s / lugs must be used for all b		-	· · · · · · · · · · · · · · · · · · ·		
General Requiremen			-			
	s motor overload protection	in accordance with t	he National Electrical C	ode (US).		
•				etention must be enabled by setting $P-50 = 1$		
				arried out according to the information show		
			,			

9.5. EMC Filter Disconnect

Drives with an EMC filter have an inherently higher leakage current to Ground (Earth). For applications where tripping occurs the EMC filter can be disconnected (on IP20 units only) by completely removing the EMC screw on the side of the product.

The **esco***drives* product range has input supply voltage surge suppression components fitted to protect the drive from line voltage transients, typically originating from lightning strikes or switching of high power equipment on the same supply.

When carrying out a HiPot (Flash) test on an installation in which the drive is built, the voltage surge suppression components may cause the test to fail. To accommodate this type of system HiPot test, the voltage surge suppression components can be disconnected by removing the screw. After completing the HiPot test, the screw should be replaced and the HiPot test repeated. The test should then fail, indicating that the voltage surge suppression components are once again in circuit.

10. Trouble Shooting

1(0.1.	Fault	Code	Messages

Fault Code	No.	Description	Suggested Remedy	
no-Fit	00	No Fault	Not required	
DI - 6	01	Brake channel over current	Check external brake resistor condition and connection wiring	
OL-br	02	Brake resistor overload	The drive has tripped to prevent damage to the brake resistor	
0-1	03	Output Over Current	Instantaneous Over current on the drive output. Excess load or shock load on the motor. Note: Following a trip, the drive cannot be immediately reset. A delay time is inbuilt, which allows the power components of the drive time to recover to avoid damage.	
I_t-trP	04	Motor Thermal Overload (I2t)	The drive has tripped after delivering >100% of value in P-08 for a period of time to prevent damage to the motor.	
PS-trP	05	Power stage trip	Check for short circuits on the motor and connection cable	
0-uort	06	Over voltage on DC bus	Check the supply voltage is within the allowed tolerance for the drive. If the fault occurs on deceleration or stopping, increase the deceleration time in P-04 or install a suitable brake resistor an activate the dynamic braking function with P-34	
U-uorf	07	Under voltage on DC bus	The incoming supply voltage is too low. This trip occurs routinely when power is removed from the drive. If it occurs during running, check the incoming power supply voltage and all components in the power feed line to the drive.	
0-E	08	Heatsink over temperature	The drive is too hot. Check the ambient temperature around the drive is within the drive specification. Ensure sufficient cooling air is free to circulate around the drive. Increase the panel ventilation if required. Ensure sufficient cooling air can enter the drive, and that the bottom entry and top exit vents are not blocked or obstructed.	
U-F	09	Under temperature	Trip occurs when ambient temperature is less than -10°C. Temperature must be raised over -10°C in order to start the drive.	
P-dEF	10	Factory Default parameters loaded		
E-tr ıP	11	External trip	E-trip requested on digital input 3. Normally closed contact has opened for some reason. If motor thermistor is connected check if the motor is too hot.	
50-065	12	Optibus comms loss	Check communication link between drive and external devices. Make sure each drive in the network has its unique address.	
FLE-dc	13	DC bus ripple too high	Check incoming supply phases are all present and balanced	
P-L055	14	Input phase loss trip	Check incoming power supply phases are present and balanced.	
h D-1	15	Output Over Current	Check for short circuits on the motor and connection cable Note: Following a trip, the drive cannot be immediately reset. A delay time is inbuilt, which allows the power components of the drive time to recover to avoid damage.	
th-FLt	16	Faulty thermistor on heatsink		
dAF4-E	17	Internal memory fault. (IO)	Press the stop key. If the fault persists, consult you supplier.	
4-20 F	18	4-20mA Signal Lost	Check the analog input connection(s).	
dAF4-E	19	Internal memory fault. (DSP)	Press the stop key. If the fault persists, consult you supplier.	
F-Ptc	21	Motor PTC thermistor trip	Connected motor thermistor over temperature, check wiring connections and motor	
FAn-F	22	Cooling Fan Fault (IP66 only)	Check / replace the cooling fan	
0-hEAL	23	Drive internal temperature too high	Drive ambient temperature too high, check adequate cooling air is provided	
OUE-F	26	Output Fault	Indicates a fault on the output of the drive, such as one phase missing, motor phase currents not balanced. Check the motor and connections.	
AFE-D I	40	Autotuning Fault	The motor parameters measured through the autotuning are not correct.	
AFE-05	41		Check the motor cable and connections for continuity	
AFE-D3	42		Check all three phases of the motor are present and balanced	
AFE-DA	43			
ALF-DS	44			
5C-FO I	50	Modbus comms loss fault	Check the incoming Modbus RTU connection cable Check that at least one register is being polled cyclically within the timeout limit set in P-36 Index 3	
5C-F02	51	CANopen comms loss trip	Check the incoming CAN connection cable Check that cyclic communications take place within the timeout limit set in P-36 Index 3
